

## Future Research on Obesogenic Environments

## Building on what we know: – the IDEFICS/ I.Family children cohort

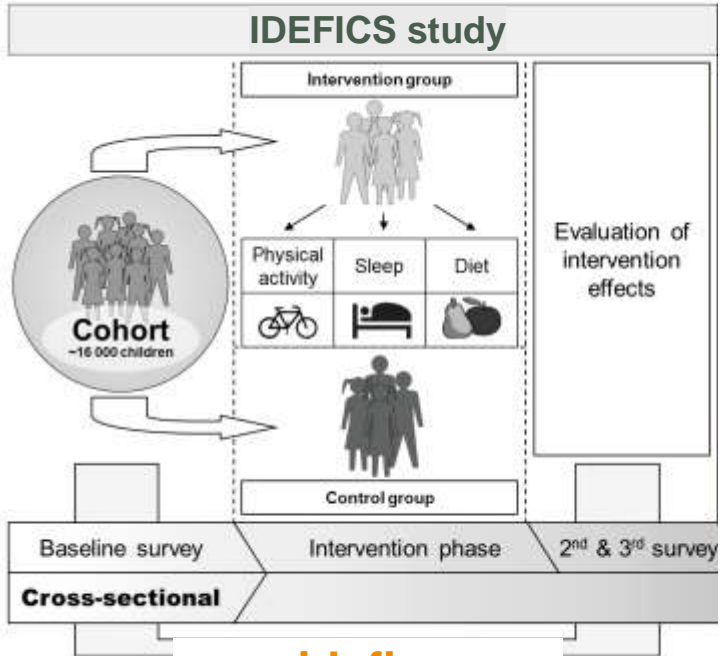

**Wolfgang Ahrens\***

Spotlight: The future of research on obesogenic environments,  
*Mundo-B, Brussels, Thursday 19th November 2015*

# The IDEFICS-I.Family children cohort

[www.idefics.eu](http://www.idefics.eu)

Determinants	Diet	Physical activity	Sleep	SES	Genes	Biomarker	Environ. & family life
Assessment	FFQ 24h dietary recall	Quest. Accelerometers	Quest.	Quest.	Saliva	Urine Blood	Parental quest. School quest. GIS
↓ per child							
Outcome	Lifestyle & nutrition related diseases and disorders						
Assessment	Overweight & Obesity	Musculoskeletal disorders	Insulin resistance				
	Anthropometry	Ultrasonography	Biomarkers				

Funded by the EC, FP 7, Project No. 266044 – Building on

# IDEFICS intervention: 6 key messages

## Diet

## Physical activity

## Stress

More water →  
**less softdrinks**

Less TV →  
**max. 1 (2) h/day**

More time with the family →  
**increase wellbeing**

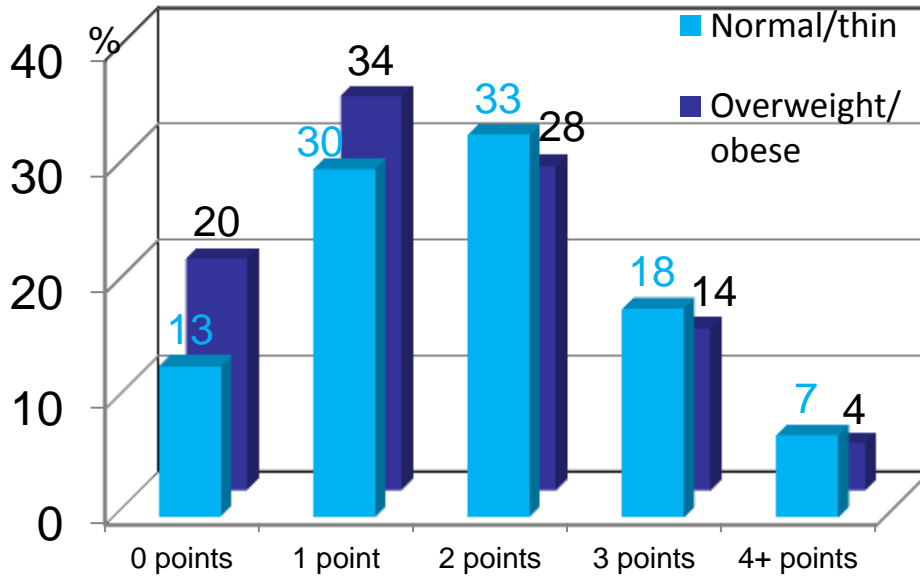

More fruits & vegetables →  
**“5 a day”**

More PA →  
**at least 1h/day (MVPA)**

Sufficient sleep →  
**min. 11 (10) h/night**

# Additive score of all 6 key messages\*: each 1 point

Score	Overweight (%)	Odds Ratio <sup>1)</sup>	95%-CI
0	27%	1.00	
1	22%	0.81	(0.65-1.01)
2	17%	0.65	(0.52-0.82)
3	16%	0.66	(0.51-0.86)
4+	12%	0.54	(0.37-0.80)

1) Adj. by age and sex

\*Premise: no missings for the 6 variables (n=5.343)

# Diet

# Risk of increased BMI z-score (20+%) at 2-year follow-up by food pattern

Dietary pattern	Tertile (reference = low)	Adj. OR	95% CI
Snacking	middle	0.94	(0.85-1.05)
	high	0.99	(0.87-1.12)
Sweet & fat	middle	1.13	(1.01-1.25)
	high	1.17	(1.04-1.32)
Veg. & wholemeal	middle	0.93	(0.83-1.04)
	high	0.88	(0.78-0.99)
Protein & water	middle	0.94	(0.84-1.05)
	high	1.06	(0.94-1.20)

Odd ratios (OR) with 95% confidence intervals from mixed effects logistic regression with country as “random effect”; adjusted for sex, age, hours of physical activity/week (continuous), country specific income (low, low/medium, medium, medium/high and high)

# Dietary Patterns

## IDEFICS (longitudinally, T0-T1)

- Dietary patterns rich in vegetables, wholemeal cereals, fruit, and low in animal products and energy-dense snacks are associated with lowered risk of overweight/obesity.
  - [1] an a-posteriori approach classified dietary patterns by principal component analysis based on dietary questionnaire data.
  - [2] an a-priori approach developed a Mediterranean-like dietary score.
  - [3] an a-posteriori approach was used to cluster memberships of IDEFICS children over time in association with SES using the K-means clustering algorithm.
- High SES children (parental education / income) are more likely to show a healthy dietary pattern at baseline and at follow-up and are less likely to adhere to a sweet pattern. Migrant children are more likely consume processed foods at baseline and follow-up [3].

# Stress/ well-being

# Family Lifestyle: Do you sit down with your child when he/she eats meals?

### % Overweight/Obesity

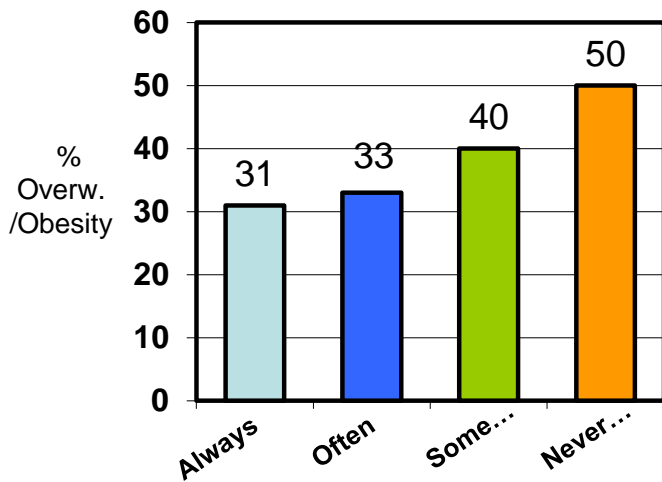

### Odds Ratios and 95%-CIs\*

\*: adjusted for sex, age, country

# Family Lifestyle: Do you sit down with your child when he/she eats meals? – Stratified by SES

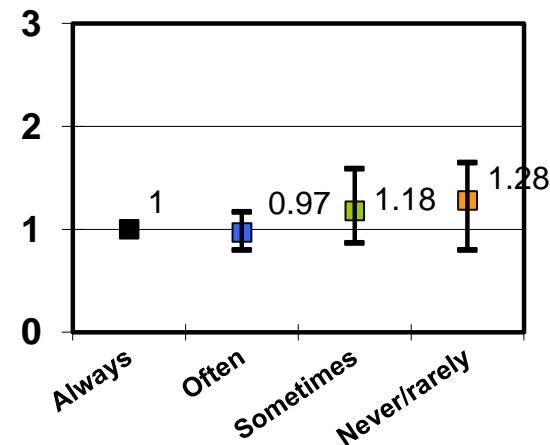

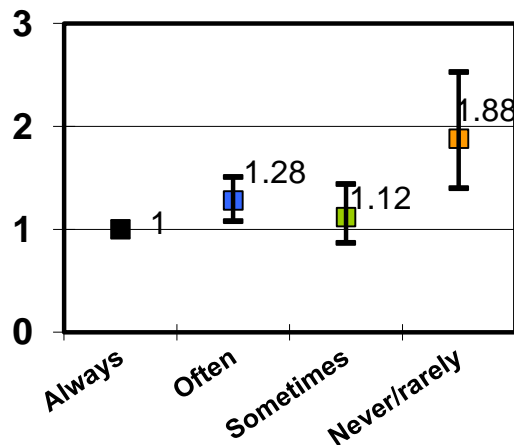

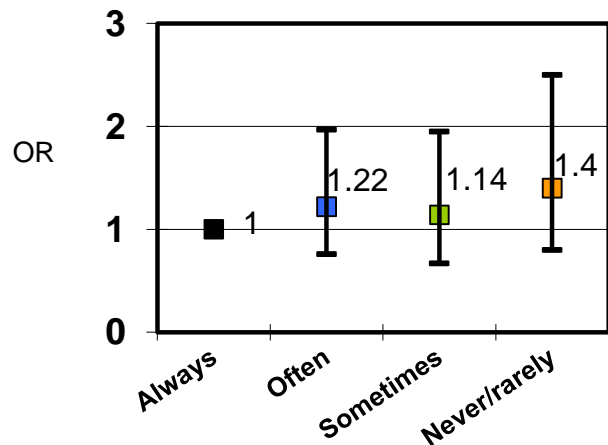

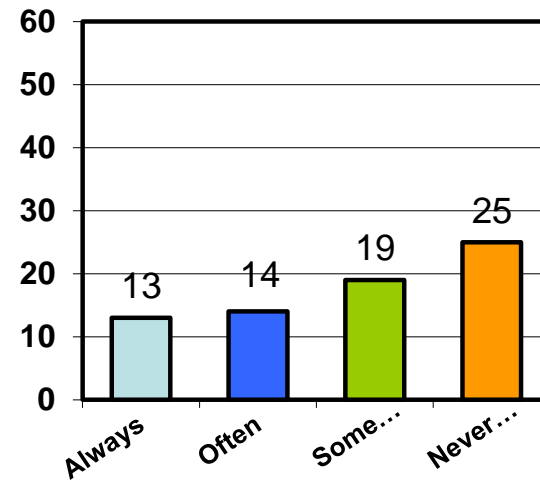

### Low SES

### Medium SES

### High SES

# TV consumption

# TV-/ screen-time and risk of excess weight gain at 2-year follow-up

Exposure variable	OR (95% CI)*	
	BMI increase <sup>#</sup>	WtHR increase <sup>#</sup>
<b>TV and TV+PC time (h/day)</b>		
TV viewing	1.22 (1.13-1.31)	1.26 (1.17-1.36)
Total screen time	1.17 (1.11-1.23)	1.18 (1.12-1.25)

WtHR = Waist-to-Height Ratio

<sup>#</sup> Highest quintile of relative change between baseline and follow-up

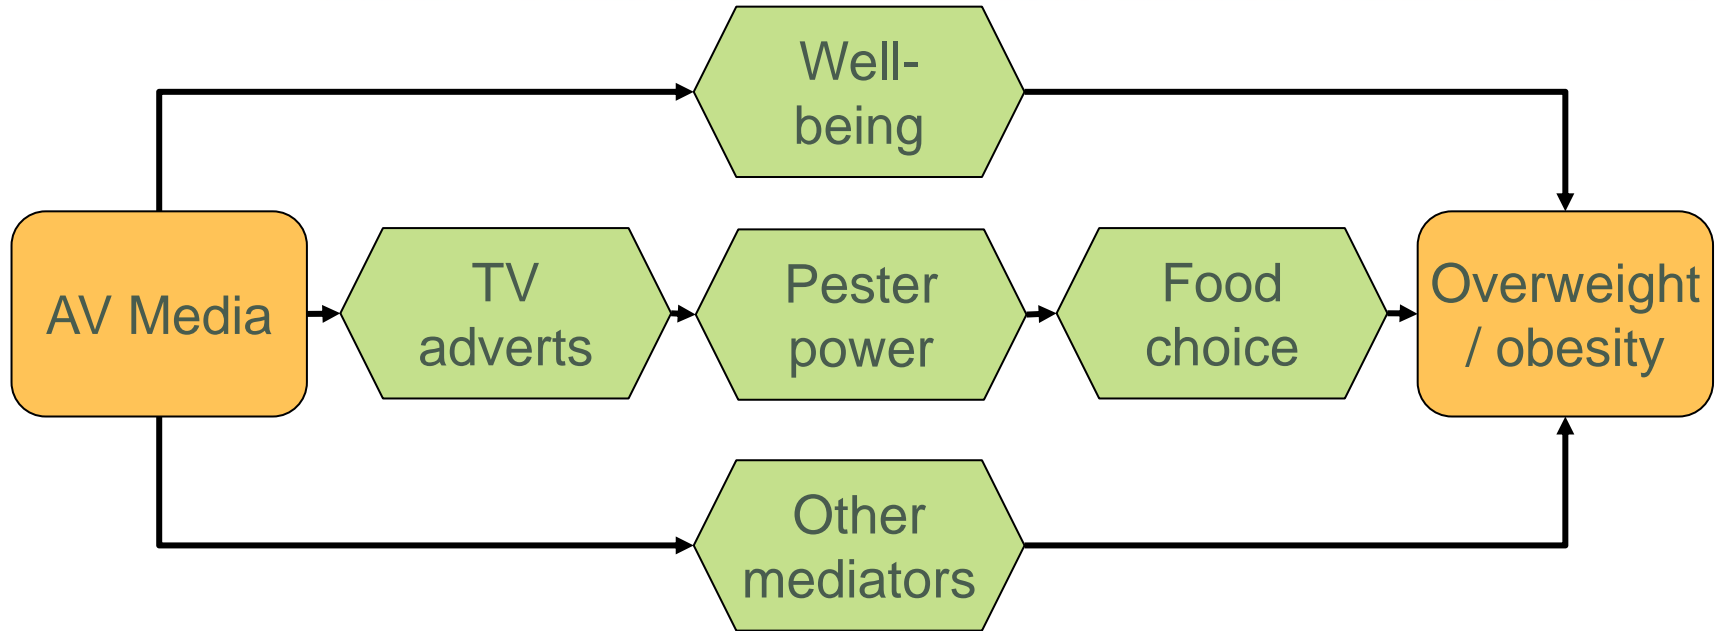

Olafsdottir et al. Young children's screen activities, sweet drink consumption and anthropometry: results from a prospective European study. [Eur J Clin Nutr.](#) 2014 ;68(2):223-8.

# Consumption of sweetened beverages and watching TV

Frequency of sweetened beverage consumption (95 % CI) (IDEFICS study, cross-sectional, Gothenburg centre, 2007–2010)

# Pathways explaining the association between AV media consumption and children's weight status

## ➤ Clear prevention messages:

- **No TV in children's bedrooms, please!**
- **Parental limits** (TV commercials, pester power) → **more favourable food choices**
- **Limiting TV advertising may foster healthier outcomes**

# Environment

Pilot study to promote vegetable consumption with a non-monetary reward (smiley stamp)

- 10 primary schools in 5 European countries (1 control and 1 treatment school in each country)
- 6-week experiment split into three two-week periods before, during, and after the experimental treatment
- Treatment: Smiley stamp for choosing a portion of vegetables or salad

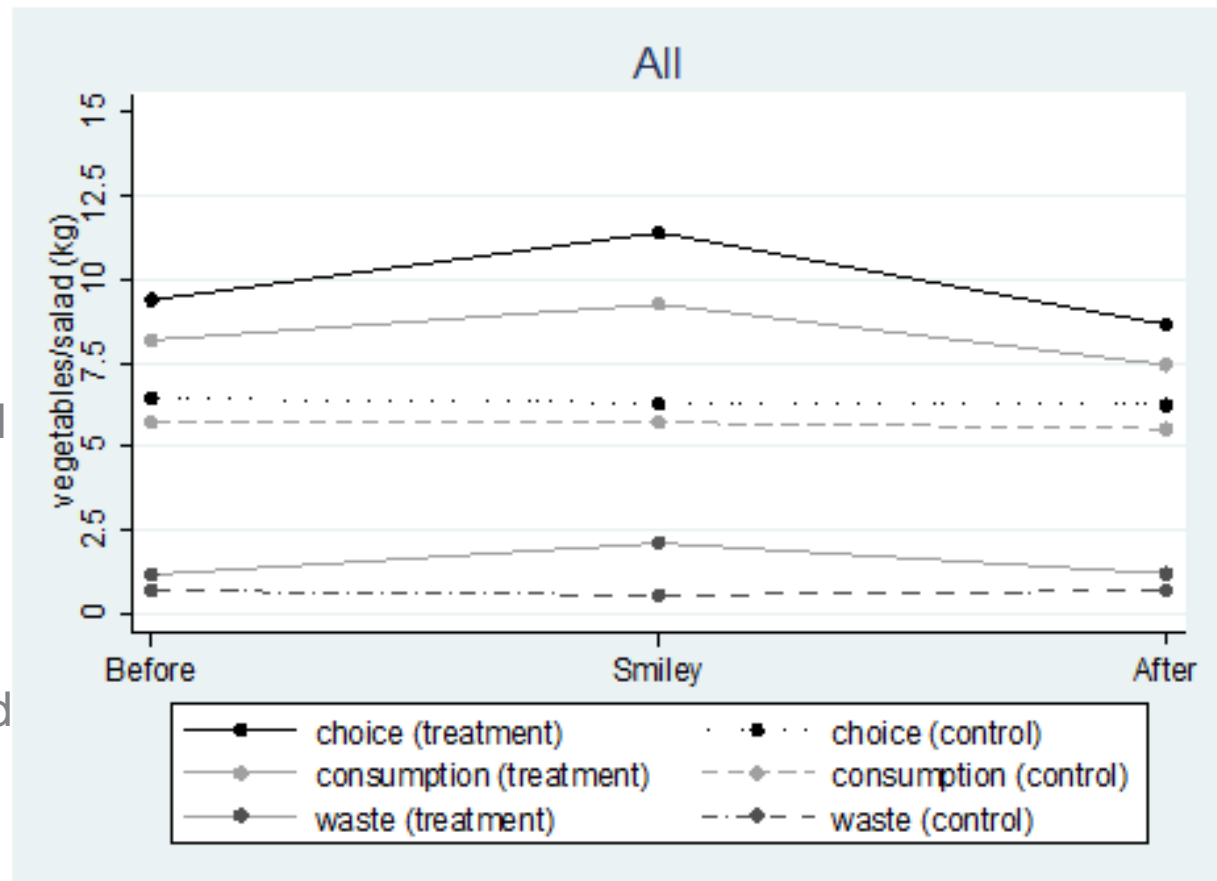

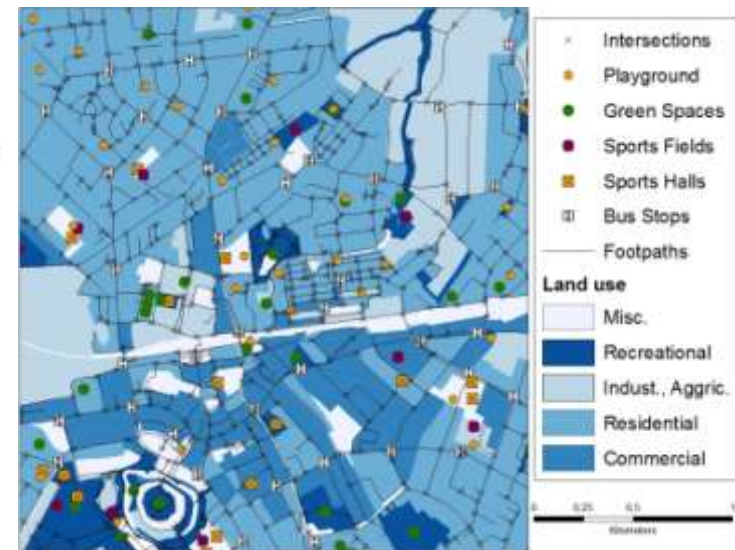

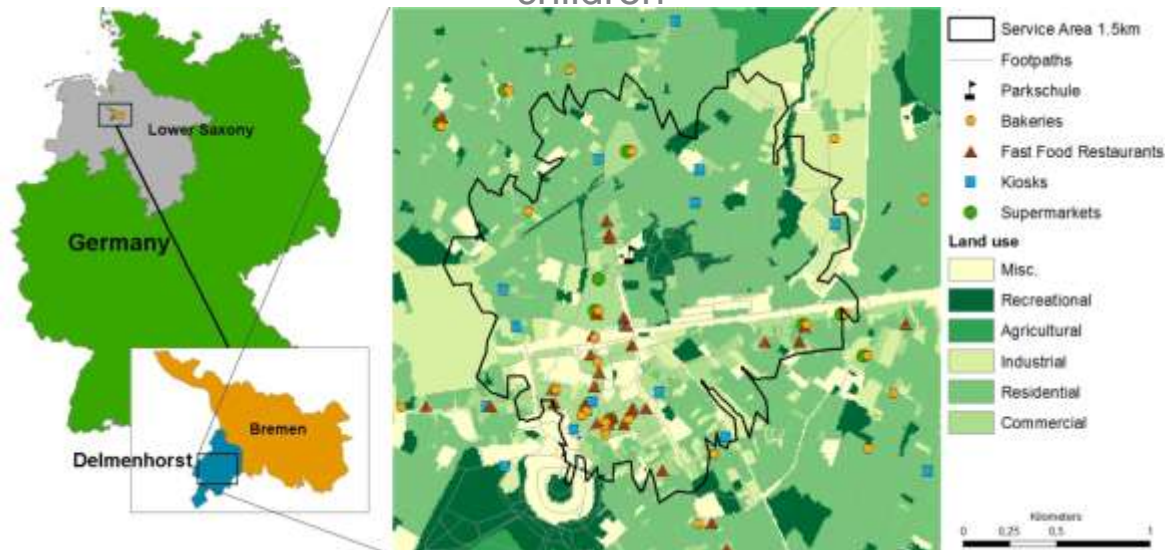

In 3 of 5 countries significant increase in both, choice and consumption, but also in waste.

- A low-cost motivational incentive can be used to motivate school children to increase their vegetable and salad consumption and make healthier eating choices.

- **Unhealthy food choices**
  - Availability and clustering of fast food restaurants in the school environment
  - FFQ of junk food and “simple sugar” foods of 384 school children
- **Urban moveability**
  - Opportunities for physical activity in the residential environment
  - Moderate-to-vigorous physical activity (MVPA) in 400 pre-school and school children

- Positive association between urban **moveability** and physical activity
  - Pilot study in one German study region
  - Moderate-to-vigorous physical activity (MVPA) in 400 pre-school and school children
  
- Predominantly residential home neighbourhoods and high availability of public open spaces positively influence MVPA in school children
  
- Physical activity in pre-school children restricted by parental safety concerns

Buck et al. (2015) Journal of Urban Health

Assess which urban characteristics have beneficial effects on children

- Impact on physical activity
  - Opportunities for physical activity
  - **Safe and aesthetic** routes for active travel
  
- Impact on emotional well-being
  - Visual contact with **natural spaces** (biophilia)
  - Green (park), blue (river/lake) and yellow (beach)

**Thank you!**
